The method comprises administering to a mammalian subject a CC cells. The method comprises administering to a mammalian subject a CC composition comprising an antibody or a polypeptide comprising an antigen cC chinding fragment of the antibody or a polypeptide comprising an antigen cC infected with HIV or SIV, and where the mammalian subject is cC infected with HIV or SIV, and where the antibody is administered in an CC subject. The antibody is a humanised antibody which specifically binds to the extracellular domain of the chemokine receptor 88C polypeptide and CC the extracellular domain of the chemokine receptor. The invention also creaptors, namely 88-2B and 88-C involved in leukocyte trafficking. The modulators of the chemokine receptors of the invention are useful for CC modulators of the chemokine receptors of the invention are useful for CC tracting diseases such as HIV or SIV infection (e.g. acquired immune CC deficiency syndrome (AIDS)), psoriasis, rheumatoid arthritis, confilammation. The present sequence is the human chemokine receptor 88-2B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                             This cDNA encodes a human eosinophil eotaxin receptor. This 5099 base pair sequence comprises a 1065 base pair open reading frame encoding a 355 amino acid eosinophil eotaxin receptor protein, flanked by a 5' genomic DNA sequence and a 3' terminator region. This novel eosinophil eotaxin receptor is a human beta-chemokine receptor designated CC CKR3. Agents which bind to this eosinophil eotaxin receptor can be used for the treatment and prevention of atopic conditions such as allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used to prevent viral infection in healthy individuals and slow or halt viral progression in infected
                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated human eosinophil eotaxin receptor - used to develop products for treating and preventing atopic conditions e.g. allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1997-549685/50.

The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CA3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 5791 BP; 1624 A; 1285 C; 1160 G; 1722 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to gene expression profiling technology to quantatively measure the expression profiles of genes selected based on their role in inflammation and their susceptibility to regulation by current multiple sclerosis (MS) treatment agents by isolating RNA from peripheral blood mononuclear cells (PBMC) of patient. The invention is particularly useful for monitoring a multiple sclerosis patient taking interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict treatment response. The present sequence is human CC chemokine receptor 3 (CCR3) gene. This gene is used to illustrate the evaluation of PBMC responses to in vitro treatment with IFN-beta or GA agents by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Zang

                                                                                                                                                                                                                                                                     A genomic DNA clone (T31334) codes for a novel receptor (W03376), designated Ros L2 or C-C chemokine receptor 3 (CKR-3), involved in leukocyte migration associated with inflammation. It was isolated from human genomic library in RMBL3 SP7/T7 vector by screening with a PCR fragment generated from eosinophil cDNA using degenerate primers (see also T31337-44). A CKR-3 cDNA clone (T31335) was also isolated, and a consensus sequence is given in T3136. The genomic and cDNA clones can used for the prodn. of recombinant CKR-3 in host cells, or to design used for the prodn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo

disease, infections and tumours.

Example 7; Page 97; 130pp; English

CC spondyloarthropathies, scleroderma, psoriasis and inflammatory dermatoses (e.g. dermatitis, screma, atopic dermatitis, allergic contact dermatitis, CC urticaria and mecrotising, cutaneous and hypersensitivity vasculitis), CC eosinophilic myositis and fascitis, multiple sclerosis, SLR, myasthenia CC thyroiditis, Bechet's disease, graft rejection (e.g. in transplantation) CC thyroiditis, Bechet's disease, graft rejection (e.g. in transplantation) CC undesirable infiltration of the skin or organs. The products can also be used to treat other diseases or conditions requiring the inhibition of CC undesirable inflammatory responses, including reperfusion injury, CC undesirable, undergoing radiation therapy, such as corticosteroid therapy, for CC congenital) deficiency (e.g. in individuals with immunodeficiency syndromes CC untoimmune disease or other drug therapy, such as corticosteroid therapy, CC which causes immunosuppression), immunosuppression due to (e.g. CC congenital) deficiency (e.g. in ectaxin) or infectious diseases such as parasitic diseases. Degenerate primers based on the guinea pig ectaxin cc chain reaction (RT-PCR) amplification of RNA isolated from inflamed, costanin reaction (RT-PCR) amplification of RNA isolated from inflamed, costanin and continues obtained from Balb/c mice sensitised to costanin and continues obtained from Balb/c mice sensitised to costanin and continues obtained from Balb/c mice sensitised to costanin and continues obtained from Balb/c mice sensitised to costanin and continues obtained from Balb/c mice sensitised to costanin and continues obtained from Balb/c mice sensitised to costanin and continues of the costanin costanin costanin and The present sequence encodes human C-C chemokine receptor 3 (CRX3), to CC which human eotaxin (hE), an eosinophil specific chemoattractant capable of stimulating eosinophil accumulation and/or attracting eosinophils (CC (including chemotaxis), binds. hE can be used to develop products for the CC cincluding chemotaxis), binds. hE can be used to develop products for the CC conditions. The products can be used to treat inflammatory or allergic CC conditions. Including respiratory allergic diseases of conditions, including respiratory allergic diseases (e.g. cc asthma, allergic rhinitis, hypersensitivity lung diseases or pneumonitis, cc eosinophilic pneumonias such as Loeffler's syndrome and chronic cc eosinophilic pneumonia, interstitial lung diseases (ILD) such as CC idiopathic pulmonary fibrosis or ILD associated with rheumatoid cc arthritis, systemic lupus erythematosus (SLE), ankylosing spondylitis, CC systemic sclerosis, Sjorgen's syndrome; polymyositis or dermatomyositis), cc systemic scaphalosporins), insect sting allergies, inflammatory cc bowel diseases (e.g. Cronn's disease and ulcerative colitis), erpondyloarthroathies, sclerosterms, psoriasis and inflammatory dermatoses

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                         CC This genomic DNA codes for novel human C-C chemokine receptor 3 (see CC AAW51744), also designated CKR-3, CCR3 or Eos L2, that binds and mediates CC chemotaxis in response to chemokines such as sectaxin, RANTES and MCP-3.

CC The DNA was isolated from a human genomic phage library using as probe a CC (see AAV07405-12) based on known chemokine receptor genes. A cDNA clone (see AAV07405-12) based on known chemokine receptor genes. A cDNA clone CC (see AAV07403) for CKR-3 is also provided. Comparison of the sequences CC suggests that the genomic DNA has an intron that separates the promoter and most of the 5' untranslated region from the coding region. A CC consensus of the genomic and cDNA sequences is provided (see AAV07404). CC The invention relates to isolated argion from the coding region. A CC consensus of the genomic and cDNA sequences is provided (see AAV07404). CC (CR-3) isolated or recombinant CKR-3 polypeptides, recombinant cCKR-3 proteins, to antibodies reactive with the receptors, and to methods CC of using these products to identify ligands, antagonists and agonists of CCR-3 can be used to treat: inflammatory or allergic diseases and conditions, including respiratory allergic CC diseases such as sethma, allergic rhinitis, hypersensitivity lung CC disease, hypersensitivity pneumonitis, eosinophilic pneumonia (e.g. disease) and conditions in the composition in the restitial lung conditions in the composition in the condition in the conditio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 2; Fig 1A-C; 185pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disease, graft rejection or cancer.

3': U95626, 42710-bp overlap

estimates computed by the Phrad assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file. Sequence Quality Assessment:
This entry has been annotated with sequence quality

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phrequality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by restriction digest. Phred

Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear
in the table. There are no significant remaining discrepancies
between the experimental and predicted values. Uniquely ordered
fragments are separated by dashed lines.

۵ .. CTD-2563A18 (UWGC:bc0730)

Sequence Quality Assessment:

This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an all tregions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear
in the table. There are no significant remaining discrepancies
between the experimental and predicted values. Uniquely ordered
fragments are separated by dashed lines.

*NOTE: This is a 'working draft' sequence. It currently
consists of 26 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

This sequence will be replaced
by the finished sequence as soon as it is available and
the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
